

Certified Installers

Program

To ensure our customers obtain the maximum performance possible from their Hitachi Cables, we recommend they utilize a Hitachi Certified Installer. To that end, we have established a network of certified contactors across the U.S. in markets both large and small. These contractors are chosen based on a number of factors, most of which are identified below. Only Hitachi Certified Installers are authorized to offer Hitachi's industry leading Lifetime Warranty. When optimum performance from a network is needed, choose cables from Hitachi Cable America and only have them installed by a certified installer.

INSTALLER REQUIREMENTS

- Must participate in Hitachi Copper & Fiber training programs or provide proof of acceptable certification or training.
- Must maintain a BICSI RCDD on staff with current credentials.
- The company must have performed installations for a minimum of 3 years.
- The contractor must provide 3 reference projects for Hitachi inspection.
- The contractor must be incorporated and maintain the appropriate insurance.

BENEFITS OF CERTIFICATION

- The ability to offer Hitachi Cable America's industry leading Lifetime Warranty.
- Access to BICSI accredited training programs.
- Access to Hitachi's substantial codes and standards library as well related technical assistance from an industry leader.
- Access to Hitachi branded vehicle decals and technician shirts.
